Figure S1 Alignment of Uk-3 *DM1* allele with Col-0 *At5g41740* and *At5g41750* color-coded for conservation.

Figure S2 Trypan Blue staining of seedlings.

Untreated, ten day old seedlings of the indicated accessions were grown at 23°C and cotyledons were stained with Trypan Blue to visualize ectopic cell death.

Figure S3 Expression on microarrays of common pathogen response marker genes.

Normalized expression of several common pathogen response marker genes for each parent and hybrid combination analyzed.

Table S1A Significantly over-represented GO terms (among genes different in Uk-1/Uk-3 F₁ versus parents, but not between parents).

Notes: Statistically significant over-representation of gene ontology (GO) term categories was calculated in GoStat (<http://gostat.wehi.edu.au>). P-values are Fisher's Exact test p-values corrected for multiple testing with Benjamini correction as implemented in GoStat. GO term annotation was based on the latest TAIR release (<http://www.arabidopsis.org>).
